SPECIFICATION

POP UP Panel Information

When storing graphic panels always roll them up with the magnetic tape on the inner surface.

After applying the hanging kits, rigidising strip and magnetic tape leave the panel flat for 24 hours to allow the adhesive to cure.

Graphic panels for pop up systems can be produced on a wide range of substrate materials. Usual methods are a paper print with a clear front protective laminate and a lightstop backing, so the print is totally encapsulated.

We recommend you consult your substrate materials supplier regarding suitable materials for your particular brand of large format printer.
